Allowable Subject Matter

Claims 51-70 are allowed.

Examiner's Statement of Reason for Allowance

The following is an examiner's statement of reasons for allowance for all claims:

Re claims 51, 63 and 68 . The prior art fails to disclose a payment system between a customer and a merchant that facilitates privacy and security of customer private data including bankcard data from merchant systems during a payment transaction to the merchant, comprising:

- a. a merchant sales terminal wirelessly transmits a terminal identification and a payment amount for a specific sales transaction;
- b. a wireless device of the customer receives from the sales terminal, the terminal identification and the payment amount specific to the sales transaction;
- c. the wireless device connects to a third party central system and transfers to the central system, a data record having a unique wireless device identifier, the terminal identifier and the payment amount;
- d. the central system using pre-stored customer bankcard data and merchant identification data, assembles and submits a payment authorization request to an automated clearing house (ACH) network, thus bypassing the merchant sales terminal and the merchant system from receiving customer private data

. The closest prior art is also the best U.S art: Treyz et al (US PAT: 6,587,835), discloses a system in which a handheld computing device may be

Art Unit: 3695

used to provide a user with shopping assistance services. A user may use the handheld computing device to handle shopping lists. The handheld computing device may display promotional material based on the shopping lists. The handheld computing device may be used to obtain information on products being sold in a store. Products may be purchased using wireless financial transactions. Reminders and other messages may be sent to the handheld computing device. The location of the handheld computing device may be monitored. Services may be provided to the user based on the location of the handheld computing device. The handheld computing device may communicate with communications equipment in retail establishments using a local wireless link (see the abstract). Although Treyz wireless hand-held device may be used for financial transactions, however in Treyz wireless device, bankcard and or account information data is first loaded into the Treyz cell phone by various Treyz means. Then that bankcard and or account information is being transferred from the Treyz cell phone to the Treyz sales terminal. Without pre-loading the hand-held device with bankcard or account information, the Treyz cell phone is unable to conduct the sales transaction. Further, in Treyz, by transferring the bankcard or account information to the merchant sales terminal, customer's sensitive information is exposed to identity theft. Conversely, claims 51, 63 and 68 teach against transferring customer's data to the merchant terminal, but teach for bypassing the merchant sales terminal and the merchant system from receiving customer private data.

Art Unit: 3695

Another prior art, Linehan (US Pat No.: 6327578), teaches four party security protocols for online payment transactions between the customer computer, customer's card issuing bank, merchant computer, and merchant acquiring bank. Although, in Linehan, credit/debit card authorization is removed from the merchant, Linehan fails to teach that a wireless device of the customer receives from the sales terminal, the terminal identification and the payment amount specific to the sales transaction; and that the wireless device connects to a third party central system and transfers to the central system, a data record having a unique wireless device identifier, the terminal identifier and the payment amount.

Finally, Kuykendall, Lavonne (Credit Card Management , v 12 , n 8 , p 78-83 , Nov 1999 **Document Type:** Periodical; Feature **ISSN:** 0896-9329 **Journal Code:** CCM) discloses how new technologies are creating alternatives to credit card payments on the Internet. However, Kuykendall fails to teach a payment system between a customer and a merchant that facilitates privacy and security of customer private data including bankcard data from merchant systems during a payment transaction to the merchant, comprising:

- a. a merchant sales terminal wirelessly transmits a terminal identification and a payment amount for a specific sales transaction;
- b. a wireless device of the customer receives from the sales terminal, the terminal identification and the payment amount specific to the sales transaction.

Updated searches revealed no references that disclosed the claimed inventions nor were any secondary references identified which could be reasonably combined with Treyz.

The drawings submitted on 01/15/2002 are acceptable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
